

OTHER CASES

A DEEP BRAIN TUMOR REMOVED WITHOUT HARM

A 32 y/o female presented with progressive weakness of the left side. She was dragging her left side entirely. She fought this for more than a year. In the last three months, things got worse. She is spiritually strong and believes very much on the alternative medicine. Here and her husband, was regularly praying. He just came from the Iraq war. Kristin went to Loyola, CNN and UC and recently flew to Arizona. She prayed to God for direction. She had a 2 year old child. She saw Dr. Ghaly three times. Loyola neurosurgeon wants to do two surgeries, one from the back to see things, and then another one from the side. Kristin and David wished Ghaly to pursue the surgery, they want a Christian believer neurosurgeon. She went to see Ghaly based on primary physician recommendation. The tumor was located deep in the brain in a difficult area with about >50 blood vessels. It used to be known as “Not Man land”. God directed the surgeon. His angels surrounded her. In less than three days, she went home with perfect shape and no deficit. Her family, some of them missionaries, praised God and was amazed about His hand. A year later, she is pregnant with her second child.

KIDNEY CANCER DIAGNOSED EARLY

An 84 y/o female called to see Dr. Ghaly for low back pain. Here primary physician sent here to another neurosurgeon but he was not available. The work—up of back showed may be something in the Right Kidney. Faith made it possible to not overlook this finding and to get CTScan to look closely to the kidney. Sure enough, it looked like cancer but it is contained but it was discovered early. Loa had no complaints of kidney problem. God made it possible to diagnose cancer before spreading. She had several physicians and daughter that works as a nurse in Mayo clinic. Mayo clinic refused to see here. Amazing how God used a neurosurgeon to diagnose a kidney cancer early. The bone Ctscan and other tests showed no other cancer anywhere. The patient and family were praising God.

GOD VISITED THE DAD AND SON

A son of a patient is a COO for a Pennsylvania Hospital. His dad came to the clinic last year and needed urgent brain surgery because of a tumor in his brain

coming from the lung. He was just diagnosed with lung cancer. The son cried in the phone and did not believe the news. His mother was with her husband as much. After the surgery, the patient heart stopped at the Ctscan. Anesthesia medication caused the depression of his circulation. Ghaly cracked in his chest and heart came back while the overdose was clearing up. The patient remained in a coma for two hours but started to recover. The dad made miraculous recovery from the arrest. I, Ghaly learned that God wanted him to live for a very good reason. The son thought his dad will live for ever and denied completely that his dad had cancer. He demanded an answer from the hospital what happened and the hospital never did. Ghaly became very close to the son in a daily and sometimes weekly. I encouraged the son to cherish every minute with his dad and I did not put any limitation to his dad. Both started to golf together and stop by the office often. The son as a COO of hospital kept flying back and forth. Both became close. Joyce, the wife is taking care of him as much as she could. The son went in every way possible to help his dad and find permanent cure for his dad. He is a chief of a hospital. He asked around and in every medical advice he screen the treatment very will. He became the right hand of the treatment. He encouraged his dad across the path. Day and night. he was calling his dad day and night for many hours. Both became as close as it can be. The son was giving his dad the hope and determination. The son took his dad to Rush, St Luke downtown Chicago for new treatment. John deteriorates with this strong treatment. Nonetheless, dad does not want to fly away, wants to be around his friends. The son faith with God increased. God open Brian eyes to see the God calling for his dad. Brain starts to talk with his dad about his departure and funeral arrangement. Brain called his dad one day and his father despite was not able to make a full sentence told his son "why do not you come today than tomorrow, it is good idea to come today". The son took a flight very much at peace knowing that this is the day of his dad. The son saw his dad deteriorating by the minute. The good time of the last year is in the front of his eyes. My dad is ready and my dad told me "I am anxious to go and meet the Lord". The son called Ghaly crying and in tears, however. The priests came and at 12am his dad passed away. "I wish I told my dad what he was to wear for the funeral" Dr. Ghaly, "I am no longer the old son, I had a great time with my dad, I have thanked my dad for bringing me to the world, we kids take it for granted but I verbalized to him, I am at peace now" and the tears ran in his eyes while the priests are praying and he stopped breathing within a minute'. John has never complaint or lost his smile. He was a quiet man, tolerant to everything. He was an angel. He accepted the cancer and the suffering with faith. He always thought, that God and his friends around him. Every word

and every test I ordered, he was in peace with himself and God. He looked at me with smile and then cry. His tears were close to him all the time and say "Sorry, I am emotional, I do not know why I am crying, after the surgery it became obvious". The dad was crying for the sadness of the world and people away from the God and lift "the pearl of the great price". My God repose your soul and pray for us, dearest dad. About your son, I always believed he will be something big and his mission is just starting.

TRIPE TO CHURCH BEFORE THE BRAIN SURGERY

A 38 y/o male was told that he had 4 weeks to live, something in the brain that will terminate his life. This happens after an episode of Headache and went to ER and had a CTScan of the head. He cried with his wife and went directly to Church and talked with his Breast. He calculated that he will spent one week with each child and a total of four weeks will pass by. An MRI was done and the author was consulted. A benign hemorrhage was found which was caused by head injury 2 weeks prior to admission while playing with his children. He was taken to surgery and the hemorrhage was removed and was for ever cured. He praised the Lord and could not believe himself.

NEVER TOO OLD TO MAKE THROUGH ILLNESS

68 y/o female came with unrecognized impending paralysis of all extremities and fatal heart disease. She and her doctor thought it is carpal tunnel syndrome and her physical fit is great. God open the eyes of a neurosurgeon she went to discuss the carpal tunnel release surgery. After diagnostic test, it was found that she had severe pressure in the spinal cord in the neck at the level c3-4. Preoperative heart test was requested by the same neurosurgeon. Surprise to everyone, she had a fatal blockage in two coronary arteries that required immediate stenting. The surgery was delayed until the heart healed. She underwent release of the compression on the spinal cord by Cervical C3-4 discectomy and fusion. A two year later she is a great shape and moved to Florida praising the Lord. Instead of inability to walk and be with a walker, she is now fully independent and made recovery with no complication. She also stopped smoking. Her daughter and son are proud of her and her faith.

A CRUSHED BRAIN DEAD SURVIVED THE CRASH

It is a privilege and an honor to report to you the Miracle of the hand of God that had touched our patient. He was a 44 Y/O husband and a father to five children, fell off the roof and resulted in massive brain hemorrhage and skull fracture. By

the time he arrived to the hospital, his brain was swollen and strangulated. He was few minutes away from permanent vegetative state and death. There was no time to go anywhere. God does wonders, it happens that day, Dr. Ghaly was on call and available (The only brain surgeon covers 100 miles) otherwise the patient will have transferred to downtown hospital as the regular daily practice. According to his wife, the loyal wife, "Thousands of people are praying for him". It is a miracle because he had severe head injury and herniation and was in a coma for two weeks and he was cooled to 95F with brain protection. It was a miracle because the human eye looked at him and said "He needs to go to nursing home", "he is going to die" "we do not know what we are doing to him hear". He underwent the emergency craniotomy to drain large hematoma on 4/26 and was placed on deep coma with temperature of 95F and subsequently had wound dehiscence with potential infection and underwent wound revision on 5/11. He also underwent tracheostomy and Gastrostomy tube feeding on 5/9/05. Eleven doctors plus partners had cared for him. More than 6 ancillary services cared for him. I had, however to learn that I am a human too with sprain pains in my joints. I was honored to be daily 24/7 available for him and his family. They now highly educated and informed regarding the condition and future. It is well known that 80% of patients presented like him will die. It is well known that the time of essence. It is also known that if he was transported to other centers like the conventional way, he will have never recovered. It is also known that if the operating room and team were not ready on the spot, he will not have recovered. Neurosurgey patients like little kids, needs their mothers with caring heart 100% of the time 24/7. The mother never give-up in her kids and she always patient and will never complain for how long it will take until the care is completed. So should be the care. Amazing miracle from being in coma unresponsive to waking up but still unable to hold his head or support his back or follow command" "He is drooling from the mouth and spell a lot of sputum from his tracheostomy and not tracking and not responding. He had a fever, pneumonia, rashes, and others. The rumors were "He will not recover and he needs to go to nursing home". In less than a week, his GCS score is 13, able to talk and walk with good memory. The patient said to his children; "What did you eat for dinner". The children answered their dad in one voice "Ham and chips dad" he answered back "OK". He looked at his youngest son (5months old) crying and kissed him. On Sunday morning, he looked at the sitter and said "Where is my wife" Sitter said "She is not hear, how I can get in touch with her" He said "Call her cell phone her is the number—". A man was in a coma with grave prognosis to come out of death to

life again. Two years later, he is active with his family and community and working.

A SECOND CHANCE FOR A JUVENILE

He is a 21 YEARS LD MALE WAS INVOLVED IN CAR ACCIDENT. He is like many of the youth, like the Prodigal Son where the roll over 40miles/hour accident brought him back to the family and God. He was rebellion and going against the right path, away from God and did not see his father for 10 years and his mother for 2 years. He went to California away from his family and lost many things. He suddenly lost control of the car while under the influence of drugs. He suffered from massive brain concussion on the spot, brain bruises and swelling. He also suffered from spinal cord injury and lung injury. He was unstable to go through any surgery and the hope was lost. The past was placed on the side. The entire family came at his bedside. Minute by minute they were waiting the hope of recovery. In 10 days after the accident, he started to wake up. He runs into pneumonia, bleeding, unable to swallow, poor nutrition and appetite. Many tubes were going in and out his body. He started to hug his mother and father, the "first time he ever did that" mother said. The family came together; the father stayed all night and the mother during the night. A beautiful dairy was written by the mother. Just before permanent spinal cord injury that was about to occur, he was rushed into another major spine surgery to fix his broken spine and get the pressure out of his spinal cord at the Thoracic spine level. A 12 hours surgery, he tolerated well and a very unstable spine was diagnosed (>80% of patient usually get paralyzed permentantly from this type of fracture (Chance Fracture called). Ten levels of his spine needed to be fixed with screws and hardware (3/11/04). He did well and praised God for His mercy and love to His Child, the Prodigal Son. He obtained for the first time grade point A in the school and has another lease in life.

6 MONTHS IN AN EIGHTY THREE YEARS OLD WITH HEMORRHAGE

An 81 years old female suffered from massive brain hemorrhage. She underwent evacuation of the hemorrhage on 8/29/04. She remained into Coma and vegetative state for al least 6 month and gradually starts to wake-up. A year later, she was able to talk, eat and recognizes her dedicated daughter. The daughter went through many difficulties, many of which, she is wasting her time with an over optimistic Surgeon. She was suffering from seizure that was refractory to medication. Some of her physicians went to the daughter to inform her that the brain is dead and no chance she will recover. The daughter never lost hope and continued

to struggle with the system and do her best with faith and hope. She continued to recover and the daughter kept taking pictures with her mother and e-mails them to her friends who continued to pray for her. Despite, the pneumonia, the old age, the huge amount of hemorrhage, she continues to recover. In the first day back on August when she had the fatal hemorrhage, a neurosurgeon (Author) came with the options to do something and be aggressive or “pull the plug”. The daughter unhesitant refused to give up in her mom soul and she was rushed for brain surgery. She remained in come for three months before she showed signs of survival. The dispute got heated up no matter where she goes and both know how to not loss hope. She and her Daughter praise their Lord and never regret in their decision.

WHY ANOTHER TWO YEAR TO LIVE?

A 65 Y/OLD FEMALE was found to have advanced inoperable lung cancer that was spread to the brain. She was told that prognosis was poor and the right thing to do is not to have treatment and to go on die peacefully. The brain tumor will put her in coma and she will not suffer. She was also told not to give-up and to have the surgery of the brain done and then followed by Chemotherapy and radiation on the brain and lung. She prayed to God and all of sudden, she saw an angel and told her to go with the brain surgeon and has the surgery done and her time is not yet” She wake up and saw the Halo over her brain surgeon and immediately she went for surgery (9/27/03) and survived for years after enjoying her kids and grand kids. She did not have much of problem after the surgery. She felt closer to God and searched for the reason of God want her to live and continued to bring love to her family and friends who were amazed wither faith and change.

BRAIN TUMOR MET WITH DAILY PRAYERS AND JOY

A 47 y/o male complained of headache to find out he has two large brain tumors. His son died from brain tumor and the family recognized him as an angel “Mitch” that is watching over the family. He has his wife and five children surrounded with this news. Jim underwent the brain surgery to remove the large tumor and then radiate the entire brain in addition to chemotherapy. He and the family turned from side to side and can not find a escape from what they already know about the brain tumor from their deceased son. He recovered well from surgery (1/17/05). The radiation and chemotherapy worked. From being decimal hope to a lot of hope. His son (5 y/o) said “Dad can I go with you to heaven if you go”. Tearful, sorrowful mixed with strength and hope and faith. A year later instead of his time to go is near; he survived another brain surgery for recurrent

tumor. He then survived more chemotherapy and radiation. While he is passing through the journey of brain tumor, he never stopped going to church daily. His smile with hope and love overwhelmed everyone comes closer. He and his wife made many trips together in memorable places. Love is his life and his family. He shared his story with many to encourage their faith and hope.

TRUST IN THE LORD AND HIS SAINTS

A 42 years old Yugoslavian mother and wife presented with two year history of seizures. She was disabled from the seizure. It was thought that this was a nervous breakdown. The mental image to the husband and daughter was terrifying. She came to USA to find out that it was an aggressive brain tumor (more than half of the brain the tumor occupied). The prognosis was poor. The surgery was performed to remove the tumor. The patient and family are ester Orthodox Christian believed in Miracles all their lives. They placed everything in the Lord. She tolerated the surgery and underwent Radiation and Chemotherapy with excellent results. No more radiation and no more Chemotherapy. She recovered for years after despite all the odds. Every time, she has an MRI to look at the brain, she prays and makes the sign of the Cross in her body together with the husband. She survived another surgery three years later for recurrent brain tumor. She tolerated more chemotherapy and radiation. She continued to praise the Lord and her children grow deeper in their faith with God. God indeed is glorified in her.

A MOTHER WITH FAITH IN A NEW LAND

A 40 years old female complained of vision problem to find that she has a large aggressive brain tumor. The location was delicate and was involving the area where she can read, write and understand. It was more than half of the brain. Few that only survives more than 9 months. She kept her faith. She saw and felt comfort toward her surgeon “as if God is telling he is watching and agreeing with what about she will go through” she said. In 4/30/02 she underwent resection of large tumor and followed by radiation and chemotherapy. In less than three months she was able to go back to work and has no complain. The follow—up MRI to date showed no recurrence with wonderful pictures of the brain “what a miracle” the patient and surgeon said. She is still receiving chemotherapy and is living her life with family as normal as any body else.

BRAIN TUMOR IS BEHIND ME

A Mother of three children of Polish inheritance with strong faith and hope went through brain surgery with dismal hope to survive for long to remarkable recov-

ery of more than 4 years so fare. She continues to live with complete faith and praises our Lord. Her mother, sisters and many more of her family and neighbor are amazed in her recovery and how well she is doing. A 46 years female presented with seizure and had MRI of the brain that showed brain tumor. On 2001 underwent brain surgery which followed by radiation and chemotherapy. Even with the tumor being located at the area where it controls the leg. No paralysis occurred. The MRI of brain showed no evidence of tumor to—date. Her strong faith in Jesus has pulled her through all the odds.

A CRUSHED BRAIN CAN RECOVER

A 33 y/o male minutes away from death from massive brain hemorrhage and swelling after a piece of steel with a weight of 40lbs falls on his head. He suffered from broken skull into pieces, and hemorrhage. Miraculously, it did happen in a day that a neurosurgeon was on call and was in the hospital. He was minutes of death. He was rushed for major brain surgery to evacuate and control hemorrhage and reconstruct the skull on 8/5/03. In less than a week, he recovered with only leg weakness in one side. He has seen God and talked about the faith to many people while he was in rehabilitation. His faith got stronger and saw the hands of God first hand. Two years later, he is back to light duty work and living with his family. The accident caused him with emotional shock that he is asking God to help him going through. The flash back to how he was close to death and how he is today keeps coming to his mental image

IN THE ELEVENTH HOUR

A 63 y/o female has suffered refractory nausea/vomiting, stomach pain and chest pain and personality change. She underwent unnecessary gall bladder surgery and stomach scopes, all to address the stomach pain. ALL DOCTORS GOT BUZZLED AND FRUSTRATED WITH PATIENT COMPLAINTS. They even call her “Goofy”. Cholecystectomy surgery did not help her pain at all. She is about to go home and God open the eyes in a student physical therapist to see that she can not walk right and support her left side. MRI of brain was ordered and a huge tumor and massive brain swelling and pending strangulation to the brain. She was days from permanent coma and death. God open the eyes of the student and the patient was saved with gift of life. She underwent brain surgery with no complication at all. She started to eat and all her complaints went away. All were amazed and thankful to the hand of God. The treatment was followed by chemotherapy and radiation and she lived longer among her family praising God. Amazing how God used a physical therapy student to make a diagnosis and

open her eyes before she goes home and die from the high pressure. God intervened since no one else was able to point to the problem and she had gone through.

A MOTHER WITH A NEWLY BORN BABY

A 32 year old mother presented with toxemia of pregnancy. While waiting for delivery of the baby, she suffered fatal brain hemorrhage. The brain herniated and became comatose. The baby was delivered by C-section and she was rushed for brain surgery. No neurosurgeon was on call. Transfer such patient to another facility will kill every hope for recovery. A neurosurgeon was called and it happened that he was available. The team make ready in no time with amazement of who is putting all these together! Five days later, she started to recover. God made all work together to get her back to her newly born baby. God's love is incredible.

A STRANGULATING BRAIN OF A MOTHER CRYING FOR HER BABY: AN EMOTIONAL JOURNEY I WISH TO SHARE

It happened that in one Sunday morning while walking into the patient room, I saw a day for God to be glorified. My patient looked awake and helpless. Her blood pressure is still out of control. Her family was by the bedside. I wondered what is going on in her mind. She is looking around but not talking or complaining. But when she was asked to do simple task, she will do. "Moley, are you in pain? Her husband called her by the nick name. She moved her head indicating "No". I still search by looking at her and try to go inside her brain. "The mother brain is still bruised and it is trying to recover. The neural wires are trying to find its circuit and its position in the millions of network" I answered myself. "What do you think, she will do if we put her in a cardiac chair and drove her as a team to her baby in the NICU" I asked. My mind continued to think; "If the theory is true that the mother brain is seeking her child but because her brain is not able to communicate yet. The sacred union and spiritual connection is still in place between the mother and the newly born infant, regardless. Then, some of the bruised circuits will see it as an opportunity to get re-oriented in the right connection. The mother's heart is searching for her lost and distant newborn". We put the mother on a relaxing cardiac chair and the team went with mixed feeling to the NICU (neonatal intensive care unit). The husband and Ghaly pushed the wheels of the cardiac chair straight ahead to the elevator going through the hospital ward. A respiratory therapist saw us and came along. Emotional expressions were seen from all the staff and nurses' faces in the ward while waiving for the miraculous mother" I could see the love and care in all the nurses and staff but I

also could see the hidden tears in their eyes. In the NICU with all the secure doors, the cardiac chair carrying the mother that she just recovering from near death experience with her head where the angry brain was strangulating and boiling from the hemorrhage and the tremendous high pressure. The respiratory therapist looked at her and could not believe that this was the patient laying in the ICU comatose with many tubes in her face and lines in her body. My mind said to my brain “many neurosurgeons have given up to salvage well documented herniated brains and go for withdrew life support. How many miracles that God could do if we just do our best and let God the rest” a quote from the book written by Ghaly “Christianity and the brain”. Immediately, kind nurses from the NICU opened their arms to the Mom and she entered as a queen and the neonatal intensivists came running to us. The hallways were cleared and we got guided by warm hands to the baby. The beautiful nurse with a motherly smile looks at the mom and said “Here is you baby. Let me place for where she belongs; over the chest of her mom” What scenery! My eyes as well others had some tears. “Is this the mother that was struggling with her life and barely survive last Sunday.” The mother looked at the baby and holds her tight in her hands while the baby had the bottle of milk in her mouth”. “Let us take the mother while carrying the baby in her chest back to the Atrium in the hospital ward” Ghaly asked the NICU nurse. The kind nurse said with courage and happiness; “Let us go where the mother is cared for”. The NICU bed came along and the journey now has two cars one for the mom and one for the baby. The doctor of NICU came running open the doors rapidly and happily. The nurses wished the mom the speed recovery. Some even volunteered to come along and work to clear the hallways and set the alarms. My heart along with many other hearts was beating for joy. We were all thanking the Lord for joining the family; the mother to the 9 day old infant. The NICU director said; “thank you and we will work together we need your neurosurgery assistance” it was an emotional for me to see the close family we have at the human level. The journey is coming to an end, but the mom and the patient did not want to end. She asked her husband “Where is my 6 year old daughter? I need to see her” What a view at the Atrium, from the hospital window, the mother and the baby and the grand father around. Her father was surprised yet was happy when he found himself not alone in the NICU with the baby. He was just checking in his grand child before he left to go home from the overnight shift with his daughter in the hospital. I asked; “What do you think the blood pressure now for the mother while carrying the child?” I got the machine and I found the electric plug and was hurrying to put the monitor around her arm could not wait to see the blood pressure. It was 140/88, the lowest that ever

been recorded for the mother. My Lord who created the mothers and the newly born how can the mother blood pressure know to regulate itself if the distant newborn comes to the chest of his mother” My mind wonders. “Did the journey helped connect some of the circuits together to her brain?” “Absolutely” Dr. Ghaly, her neurosurgeon said. “Look, an hour later, physical therapy came and walked her for the first time 200 feet.” Is this the same mother that her blood pressure is barely controlled yesterday and everyone wants to leave her in a quit room, undisturbed, because of high blood pressure. No one came to think, it is the heart of the mother crying to see her distant 9 day old child by her. “Do not you ever make a mistake about the name of her child, she will correct you” said the husband. What an education to me and others. The bruised brain even if he can not communicate, but still connected to the main universe and getting its life from the Almighty. While the mother brain is suffering with major bruising, her brain never stopped crying for her child, even if the mother’s brain is in the depth of coma. The mother’s brain is connected with child brain through the spiritual world with no physical boundaries. I wish that everyone worked hard with her to know this story. Thank you for letting be part of this miracle.

I turned and waived; “I am going to the church of the Lord to praise Him for all His Grace.”

WE NEED TO HAVE FAITH

I have found it is not uncommon, without any warning, for patients to wake after being in a deep coma with no good explanation. I could tell of many more patients who I am sure recovered because the Divine Power intervened and recovery took place with the limited resources medicine can offer.

How many times during surgery I have felt the patient will surely die, that brain hemorrhage will not stop, brain swelling gets worse and herniated through the skull? Then suddenly, by calling on the Most High, that patient makes it. The brain quiets down, the swelling ceases and the hemorrhage stops. Suddenly the brain looks good, healthy and pulsating.

How many times I have felt that a major defect, such as paralysis or an inability to talk will occur based on what I have found or what happens during surgery! With my heart open to heaven, and a request to God, the patient recovers completely. How many more do we need to see to believe, and all the unexplainable results continue from generation to generation.

Repeatedly, I have watched the patient’s soul departing when all the beloved ones are around it. The heart may continue to beat and circulation continues

until all family members can come from all points on the compass. The heart continues despite the long delay as family members assemble. And in the fullness of time, the spirit leaves the flesh in peace, in the midst of beloved ones. The heart then gradually slows down to rest. I am always touched when I see the strong faith of the family and the religious pictures that they bring with them to be placed in the proximity of their beloved one. The faith, love and prayer of the family and entire community became the overwhelming healing power to their beloved one.

I worked at Cook County as an anesthesiologist, a major trauma center dealing with injured victims and indigents. Cook County is a challenging place. You see patients for the first time with no previous medical care with severely injured multi-systems. As an anesthesiologist, you face putting a patient under anesthesia in emergency basis and an endo-tracheal tube should be placed in the breathing pipe. How many times that I was about to fail to place an endo-tracheal tube and the patient would become deprived of oxygen? Immediately I said “**God have mercy**” and the tube goes smoothly and oxygen flushes the whole body and revives of the body.

An intuition came to Dr. Ghaly (anesthesia attending) to check in the anesthesia floor for women in labor. A pregnant female in the lab was found to be unconscious, unable to breathe or move after a spinal epidural analgesia done by a resident. The patient was immediately resuscitated and with the help of her mother recovered fully.

Why did an intuition come to a distant human mind to do a mission and save the life of a person? It is beyond our comprehension.

Not much information is available regarding the brain’s cognitive function during deep coma. We can only assess by movement of limbs and reaction to light, but what goes on in the brain is not known. Moreover, when the patient recovers, he or she has no memory or recollection of the time spent in the coma. The process of thought, awareness, and intellectuality during coma state remains obscured. In fact, we can only assess the immobile state of the patient and as for their thoughts, we can only guess.

The more I see and deal with cases in my career, the more I feel humble and believe of what I do not know. I have learned not to give up on any patient, even if the prognosis is very gloomy, until the last breath. God wants us to do our best, and He will do the rest. The Divine power is at hand, and all that we need to do is believe, and ask Him for strength. The quick habit is to simply pull the plug and let the patient return to his God. But each person is a complete person and not a number in front of God. God is capable of curing the person. God’s deci-

sion is very clear. If the patient passes away, it will occur despite any human intervention, and vice versa. This is where my prophecy began: Do your best; learn in depth; care from your heart; and let God do the rest.

Faith is available to everyone, anytime. Once the cell opens, Divine energy will enter and integrate with the components of the cell and will bring life to the cell. It will proceed to all the desired cells, one after the other. **All we need is faith.**
